Rol·a·matic
Remote Control Operator

RW-1®

Two remote control transmitters included!

Make life easy...

Make life easy...

Patented world-wide, the Gliderol Rol-a-matic RW-1 makes arriving home and opening your garage door on a wet, dark night a simple matter of pressing a button. Drive in, warm safe and dry.

The opener fits to a new door or is an easy upgrade to an existing door. A 24 month guarantee adds to the peace of mind the Gliderol brand brings.

Safe, powerful & quiet...

This slim-line unit fits discretely at the side of the door curtain and the 500N motor powers the door quietly and safely. The opener is CE marked and built within our audited ISO 9001 quality systems.

Automatic force sensing ensures the door operates safely at all times, stopping and reversing should an obstruction be encountered in accordance with standard EN13241-1:2003.

Power to spare - 500N
for doors up to:
5m wide
3m high
with a maximum
area of 12sqm.

The built in
courtesy light
illuminates
automatically
for 3 minutes.

Efficient technology...

Low voltage control circuits and stand by consumption of just 2 watts keeps power usage down to a minimum.

Smart technology...

Two transmitters are included and a further three Glide-a-Code transmitters can be added, each producing a unique rolling code for secure operation every time.

Each transmitter can operate a further three compatible devices with a push button for each.

The package also includes a wireless wall switch that allows operation of the opener and three other compatible devices from inside the garage without the need for a hand transmitter.

Adaptable technology...

The opener can be set to close automatically after 1 or 2 minutes, perfect if you forget to close the door on leaving home. As a precaution safety beams must be fitted.

Accessories such as an external light can be connected to the control unit and operated with the door.

If the power fails, a handy disengage cord allows the door to be opened manually with the option of an external release for garages with no other entry. A battery back up unit is available to keep your door operating.

Fits In just 50mm
